1. Outline

NACHI ROBOT “SRA series” is optimal robot for spot welding, material handling and other applications, and provides dramatically improved productivity by its overwhelming speed and compact body.

This series contains not only the “Standard type” but also the “A-Trac4 type” which equips the best designed cable support system for spot welding, and furthermore contains the “Long arm type” which spreads its operating range.

Standard type

	Max. payload 166 kg	Max. payload 210 kg
Shelf mount	SRA166T-01	SRA210T-01

A-Trac4 type

	Max. payload 166 kg	Max. payload 210 kg
Shelf mount	SRA166T-01A	SRA210T-01A

Long arm type

	Max. payload 166 kg
Shelf mount	SRA166TL-01

■ **World class speed robot**

- Cycle time reduced by 3 improvements of light weight, high rigidity and quick motion control, resulting in high acceleration and minimum vibration.

■ **Ease of use**

- Operating range of robot is irrelevant to the payload mass. Axis 5 (wrist) operating range is maximum in its class. These features open the robot to more diverse applications, thus resulting in easier application design (*1).
- Sufficient application wires and tubes are installed inside arm in order to apply to bigger and high function tool.

■ **“A-Trac4” that is the best design for spot welding**

- Spot welding cables are installed around the fore arm (axis 3 arm). Because the cable behavior is stably connected with the robot’s motion, reliability of cables has substantially advanced.
- In case of off-line programming (*2), taught robot pose and cable arrangement needs to be modified because the cable behavior is difficult to simulate. But by utilizing “A-Trac4”, this work is unnecessary, thus the lead-time until startup of the production line can be reduced.

*1; “Application” is the purpose of robot’s usage. For example, spot welding and material handling.

*2; “Off-line programming” is teaching the robot program on desk, prior to installing the real robot. Computer (hardware) and special simulator (software) are necessary except robot.

2. Basic specifications

■ Standard type / Long arm type

Item		Specifications		
Robot model		SRA166T-01	SRA210T-01	SRA166TL-01
Construction		Articulated		
Number of axis		6		
Drive system		AC servo motor		
Max. working envelope	Axis 1	±3.14 rad (±180°)		
	Axis 2	-1.13 ~ +2.09 rad (-65 ~ +120°)		
	Axis 3	-1.85 ~ +3.67 rad (-106 ~ +210°)	-1.57 ~ +3.67 rad (-90 ~ +210°)	
	Axis 4	±6.28 rad (±360°)		
	Axis 5	±2.36 rad (±135°)	±2.27 rad (±130°)	±2.36 rad (±135°)
	Axis 6	±6.28 rad (±360°)		
Max. speed	Axis 1	1.92 rad/s (110°/s)	1.75 rad/s (100°/s)	1.83 rad/s (105°/s)
	Axis 2	1.92 rad/s (110°/s)	1.57 rad/s (90°/s)	1.57 rad/s (90°/s)
	Axis 3	2.01 rad/s (115°/s)	1.75 rad/s (100°/s)	2.01 rad/s (115°/s)
	Axis 4	3.14 rad/s (180°/s)	2.44 rad/s (140°/s)	2.44 rad/s (140°/s)
	Axis 5	3.02 rad/s (173°/s)	2.32 rad/s (133°/s)	3.02 rad/s (173°/s)
	Axis 6	4.54 rad/s (260°/s)	3.49 rad/s (200°/s)	4.54 rad/s (260°/s)
Max. pay load	Wrist	166 kg	210 kg	166 kg
	Forearm *1	45 kg (90 kg at maximum)		
Allowable static load torque	Axis 4	951 N·m	1,337 N·m	951 N·m
	Axis 5	951 N·m	1,337 N·m	951 N·m
	Axis 6	490 N·m	720 N·m	490 N·m
Allowable moment of inertia *2	Axis 4	88.9 kg·m ²	141.1 kg·m ²	88.9 kg·m ²
	Axis 5	88.9 kg·m ²	141.1 kg·m ²	88.9 kg·m ²
	Axis 6	45.0 kg·m ²	79.0 kg·m ²	45.0 kg·m ²
Position repeatability *3		±0.1 mm	±0.15 mm	±0.15 mm
Installation		Shelf mount		
Ambient conditions		Temperature: 0 to 45 °C *4 Humidity: 20 to 85%RH (No dew condensation allowed) Vibration to the installation face: Not more than 0.5G (4.9 m/s ²)		
Noise *5		68.5 dB		
Robot mass		1,210kg	1,250kg	1,240kg

1[rad] = 180/π[°], 1[N·m] = 1/9.8[kgf·m]

- On controller display, axis 1 to 6 is displayed J1 to J6 for each.

- The specification and externals described in this specifications might change without a previous notice for the improvement.

- Explosion-proof is not available.

*1: This value changes by placement and load conditions of a wrist.

*2: The Allowable moment of inertia of a wrist changes with load conditions of a wrist.

*3: This value conforms to "JIS B 8432".

*4: Permitted height is not higher than 1,000m above sea level. If used in higher place, permitted temperature is affected by height.

*5: Robot noise is A-weighted equivalent sound level measured under "JIS Z 8737-1" (ISO 11201) with max. payload and max. speed.

■ A-Trac4 type

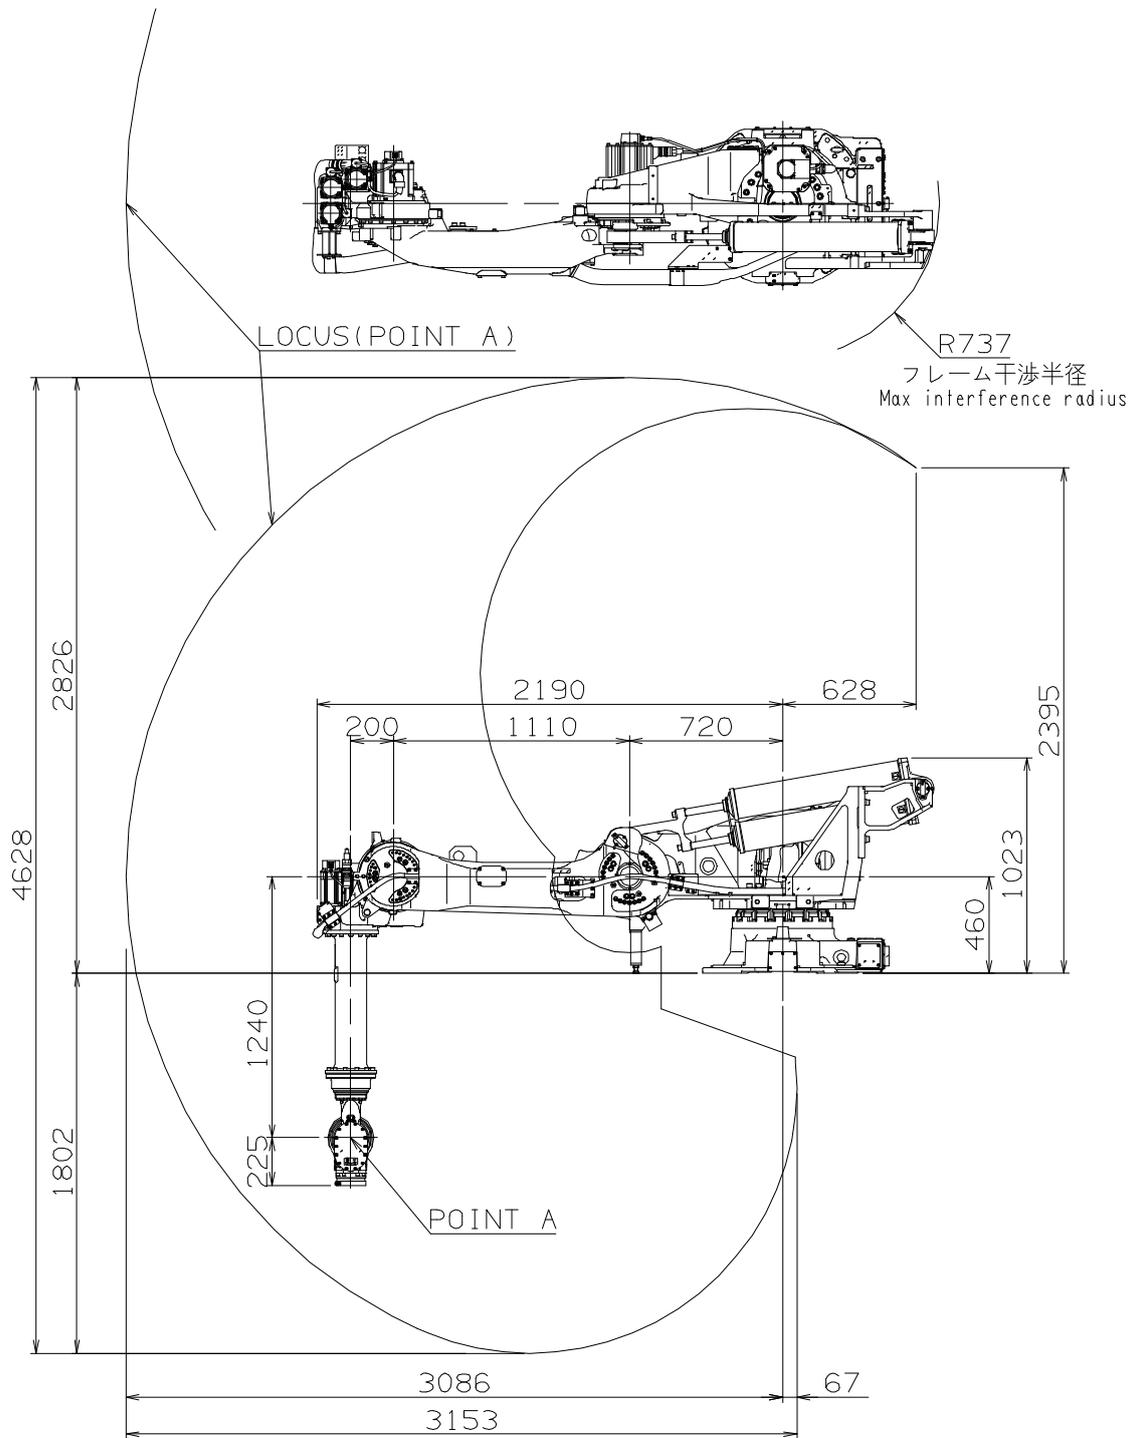

Basic specifications when cable support "A-trac4" is equipped (only difference from standard type)

Item		Specifications	
Robot model		SRA166T-01A	SRA210T-01A
Max. working envelope	Axis 4	±3.67 rad (±210°)	
	Axis 5	±2.09 rad (±120°)	
	Axis 6	±3.58 rad (±205°)	
Max. pay load	Forearm *1	15 kg (60 kg at maximum)	
Robot mass		1,310 kg	1,350 kg

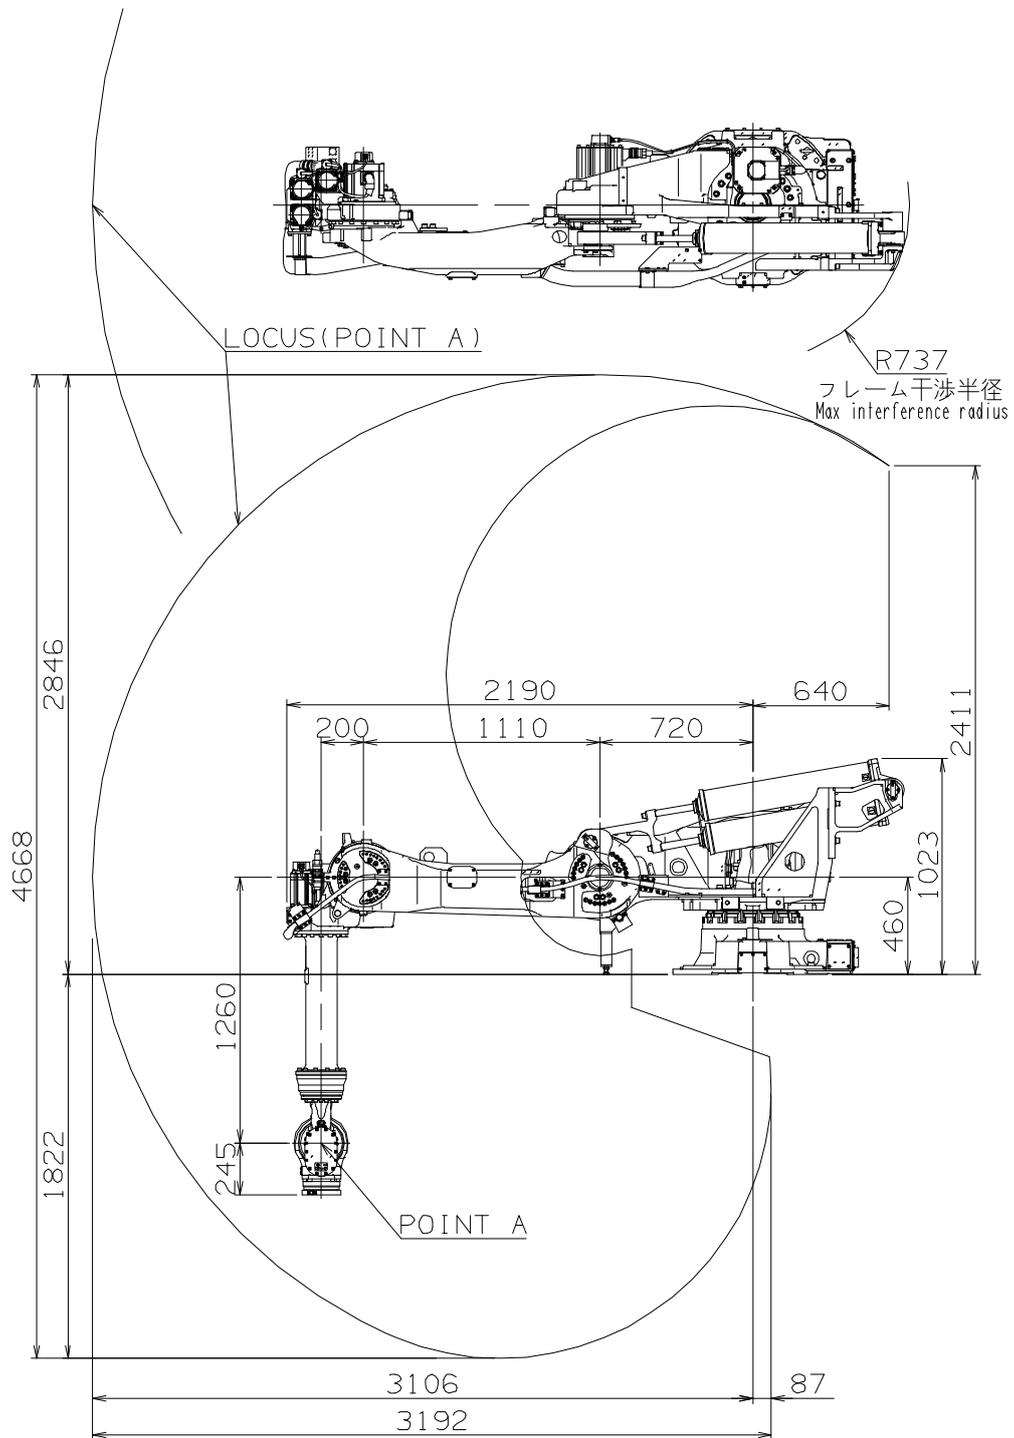

*1: This value changes by placement and load conditions of a wrist.

3. Robot dimensions and working envelope

4. Detail of load mounting plate

■ Wrist

For the end effector fixing bolts, use the mounting P.C.D. shown in the following figures. Besides the mounting P.C.D., different P.C.D. (option) is available. For details, contact our service division.

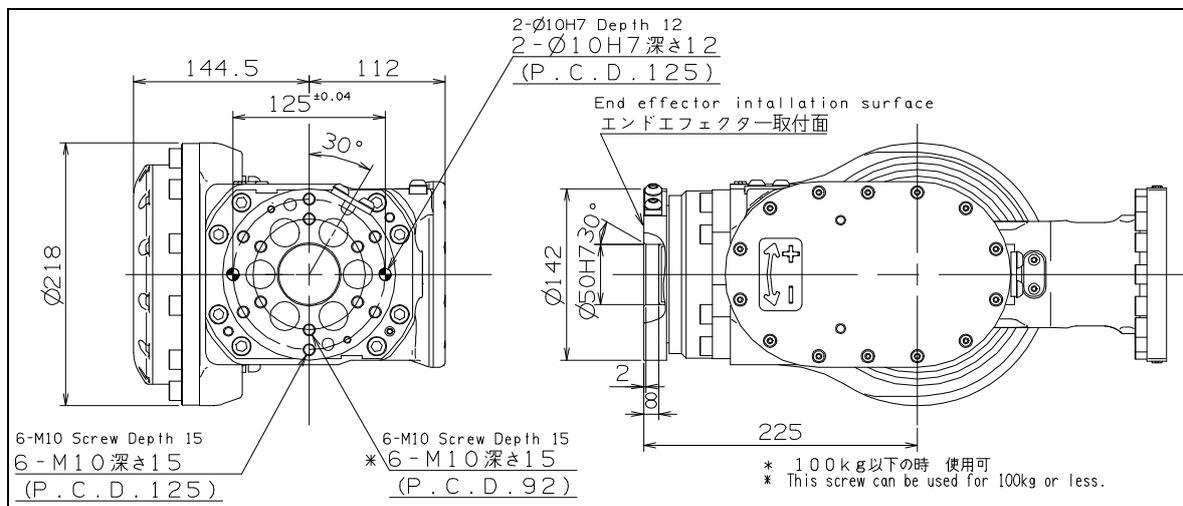

Be sure to screw the M10 tool fixing bolts in the wrist not deeper than the screw depth in the mounting face. Screwing the bolts deeper than the screw depth may damage the wrist.

【SRA166T-01】【SRA166TL-01】

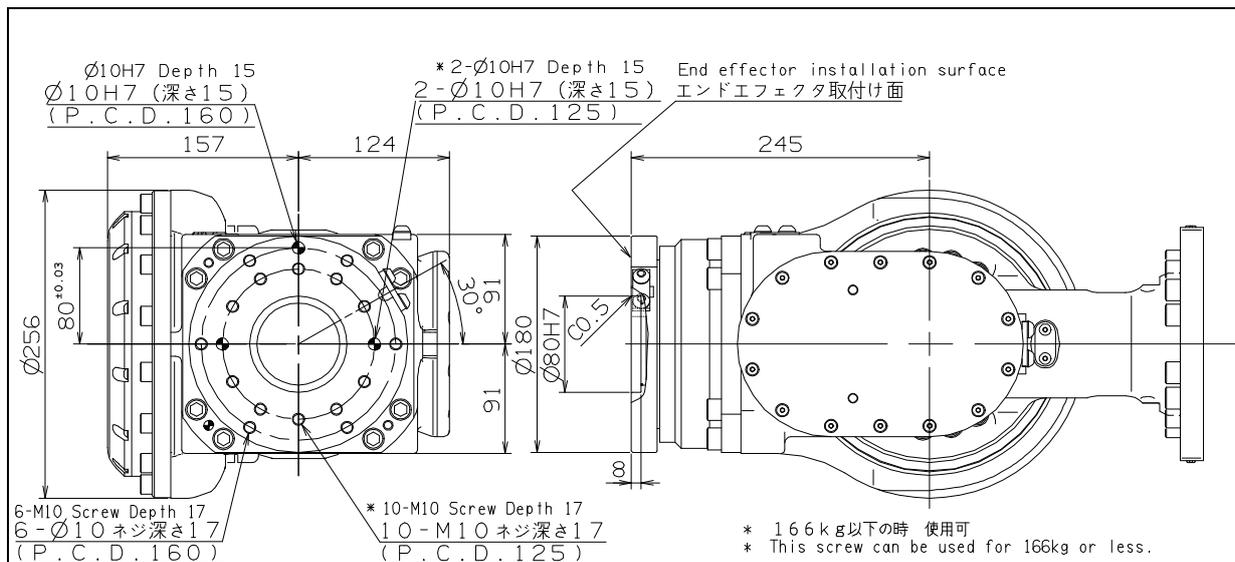

Use the mounting P.C.D.125 when you install the load of 100 kg or more.

【SRA210T-01】

Use the mounting P.C.D.160 when you install the load of 166 kg or more.

 CAUTION	Be sure to screw the M10 tool fixing bolts in the wrist not deeper than the screw depth in the mounting face. Screwing the bolts deeper than the screw depth may damage the spring and cable inside of A-Trac4.
 IMPORTANT	Use the mounting P.C.D.125 or 160 when you install the load of 100 kg or more. (Only when the customer doesn't consider strength of the bolt.)

【SRA166T-01A】

- * 166kg以下の時 使用可 (P.C.D.125)
- * This screw can be used for 166kg or less.
- # 100kg以下の時 使用可 (P.C.D.92)
- # This screw can be used for 100kg or less.

Oblique line area is working envelope of A-Trac4 spring.
 Working envelope of tool should be outside of this area,
 otherwise tool may be broken by the interference with A-Trac4 spring.
 Moreover, this interference will cause the damage to the cables inside of A-Trac4 spring.
 Mesh area is where the tool (end effector) can be mounted.

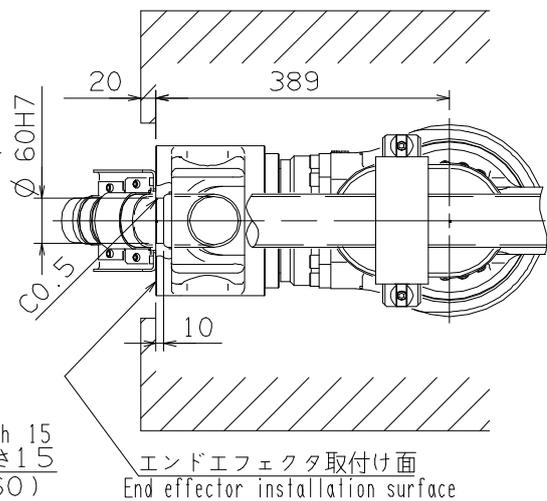

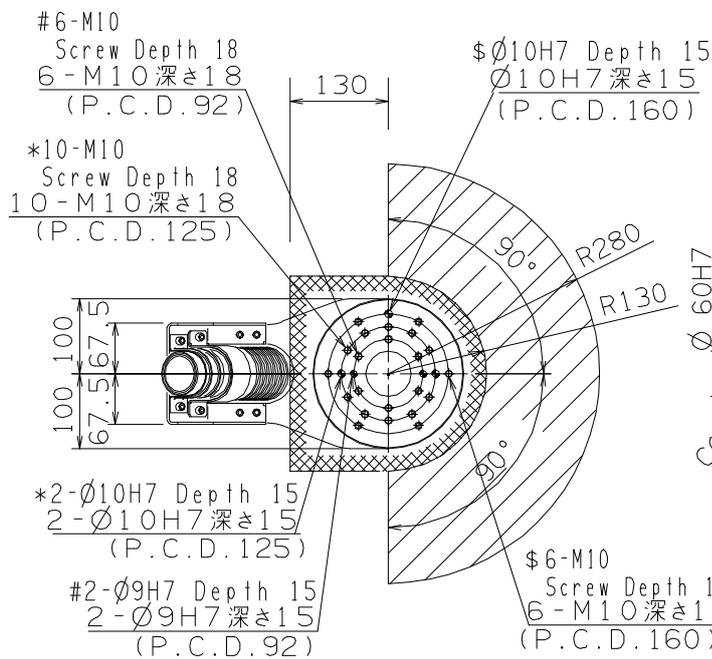

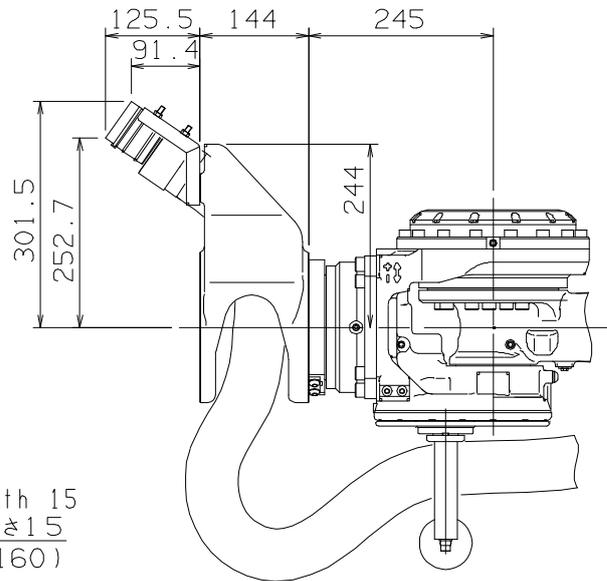

【SRA210T-01A】

- \$ 210kg以下の時 使用可 (P.C.D.160)
- \$ This screw can be used for 210kg or less.
- * 166kg以下の時 使用可 (P.C.D.125)
- * This screw can be used for 166kg or less.
- # 100kg以下の時 使用可 (P.C.D.92)
- # This screw can be used for 100kg or less.

■ Upper part of forearm

Ancillary equipment can be mounted to the upper part of robot forearm.

In case of A-Trac4 model, screw holes of 4-M8 depth 12 marked ※ cannot be used because they are hidden in the cover part.

5. Installation procedure

The installation location and the installation procedure of the robot are critical factors to maintain robot functions. The ambient conditions of installation location not only have influence on the life of mechanical sections of the robot, but also get involved in safety issues. Consequently, strictly observe the environmental conditions shown below. Furthermore, utmost care should be exerted for the installation procedure and the foundation for the robot in order to maintain the robot performance. Strictly observe the installation procedure for the robot provided below.

Installation

To install the robot, give it first priority to thoroughly consider safety of workers and take safety measures. The following describes precautions for this purpose.

Safety measures against entry in the robot operating area

 WARNING	<p>While the robot is in operation, workers are in danger of coming in contact with the robot. To avoid that, install a Safety fence so as to keep the worker away from the robot. Not doing so will cause the workers or other persons to accidentally enter the operating area, thus resulting in accidents.</p>
---	---

■ Installation location and ambient conditions

Conditions (temperature, humidity, height and vibration) are written in “2. Basic Specifications”. Further ambient conditions listed below must be observed.

- (1) Location with the drainage structure so that swivel base is not flooded, when the liquid such as water or cutting fluid is splashed on the robot body
- (2) Location with no flammable or corrosive fluid or gas.
- (3) Type D grounding (the grounding resistance is 100Ω or less) is necessary.

■ Installation procedure

While robot moves, large reaction force is applied to the swiveling base from all directions. Consequently, the robot should be installed in such a manner that the foundation endures reaction force caused by accelerating or decelerating the speed to lock the robot, not to mention that it endures static loads.

Repair uneven spots, cracks, and others on the floor, and then install the robot by following to the table below. If thickness of floor concrete is less than needed level, an independent foundation should be constructed. Inspect the foundation prior to the robot installation, and then construct the foundation, if necessary.

Robot Model	SRA166T-01 SRA166T-01A	SRA210T-01 SRA210T-01A SRA166TL-01
Thickness of floor concrete	Not less than 160 mm	
Installation parts *1	8 bolts of M20 (JIS: Strength class 12.9) not less than 65mm 8 plain washers of not less than 4.5 mm in thickness and HRC35 in hardness	
Tightening torque	560 ± 30 N·m	
Allowable repeated tensile *2	Approximately 53,000 N	Approximately 64,000 N

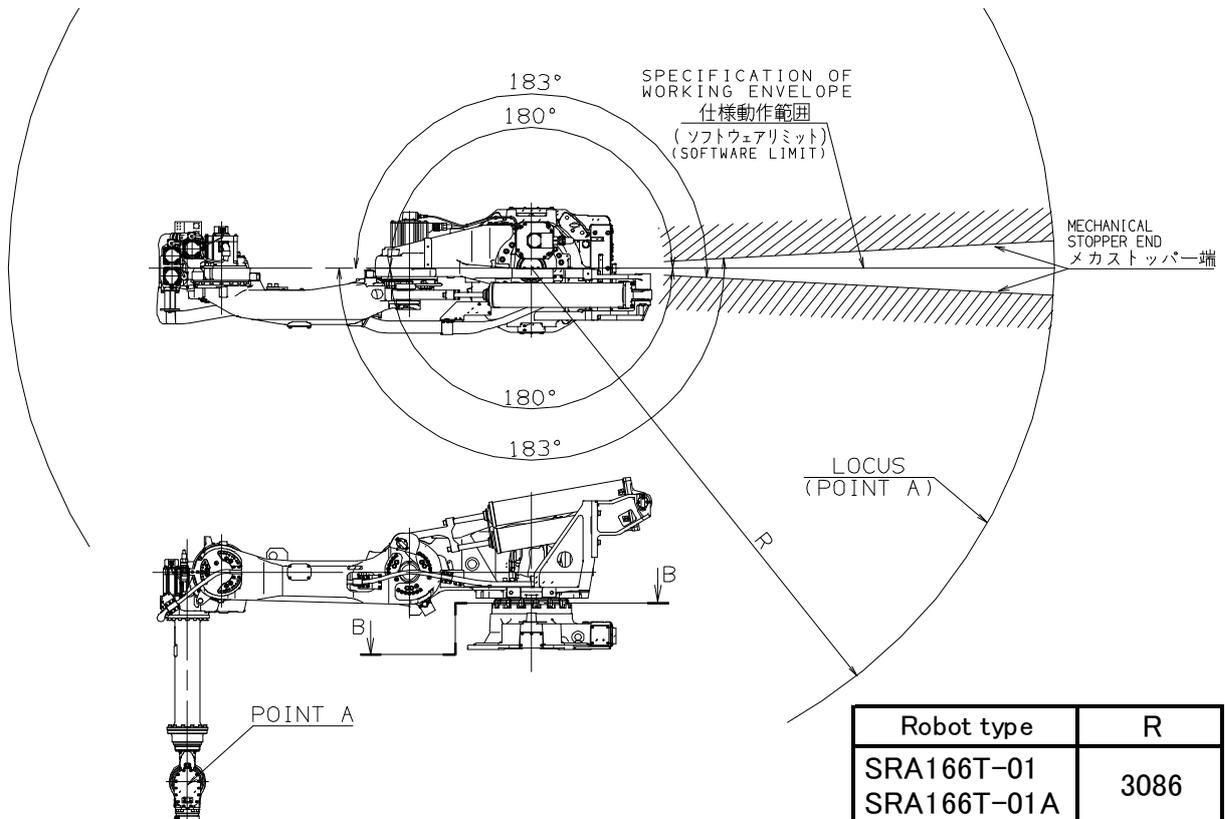

*1 : Installation parts are not accessory of robot.

*2 : This tensile is per installation bolt when robot is installed with all bolts written in table above.

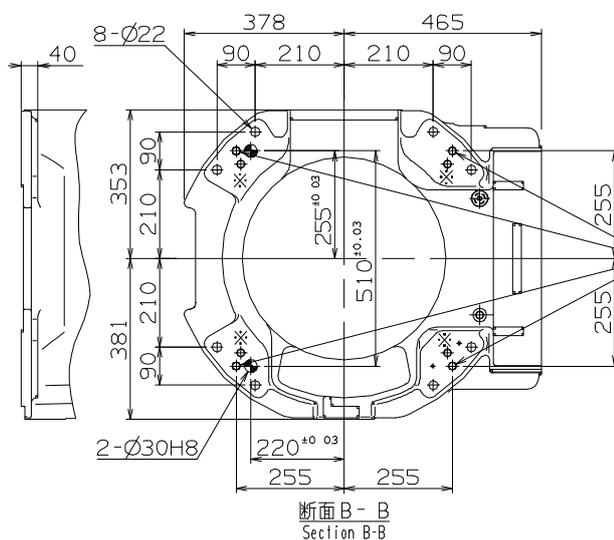

■ Installation space

To install the robot, lock the swiveling base of the robot.

 CAUTION	<p>The mechanical stopper end is located in a position exceeding the specified working envelope (software limit) of axis 1 by 3°. To install the safety fence, with consideration given to the wrist configuration and the shape of end effector.</p>
 DANGER	<p>On axes 1, 2 and 3, the robot working envelope can be regulated for safety (optional function). Since optional parts should be installed to enable this function, do not independently move the standard parts (e.g. mechanical stopper).</p>

断面 B - B
 Section B-B

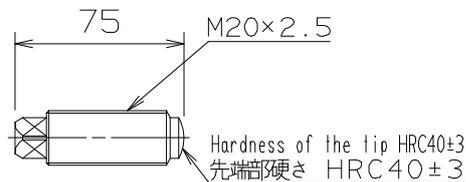

■ Accuracy of installation surface

When installing robot, strictly observe precautions listed below to cause no deformation in the swivel base.

- (1) Make the deviation from the flatness of the 4 plates on the robot installation surface fall within 1.0 mm.
- (2) Make the deviation in height between the 4 places of each base plate installation surface and the robot installation surface fall in the range of 1.0 mm (± 0.5 mm).

- (3) If the two precautions above cannot be observed, use jack bolts to bring the four places into even contact with the installation surface.

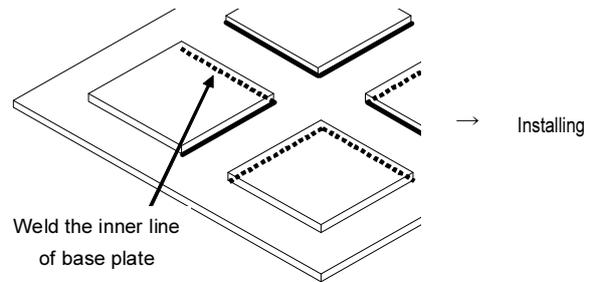

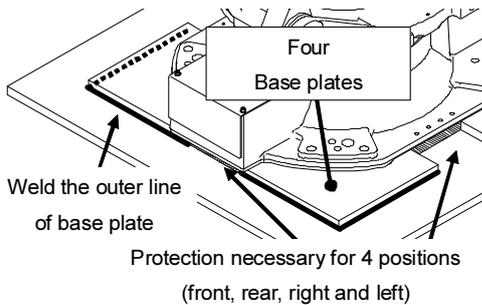

■ Welding of base plate

Protect the space (4 places of the front, back, left and right) on robot bottom and installed side by the cover etc. as follows when you weld with the base plate installed in the robot body by the welding spatter and the spark, etc. so that wiring in the robot should not receive damage. After welding the outer line, once remove the robot and weld the inner line.

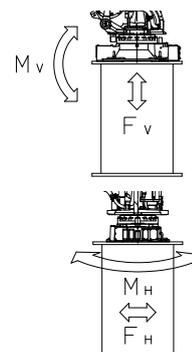

Temporary install the robot, and weld the outer line of base plate.

Once remove the robot and weld the inner line.

■ Maximum robot generative force

Robot model	Max. vertical generative force F_V	Max. horizontal generative force F_H	Max. vertical generative moment M_V	Max. horizontal generative moment M_H
SRA166T-01 SRA166T-01A	55,500 N	41,000 N	123,600 N·m	107,000 N·m
SRA210T-01 SRA210T-01A SRA166TL-01	62,000 N	46,700 N	148,500 N·m	129,100 N·m

6. Allowable wrist load

CAUTION

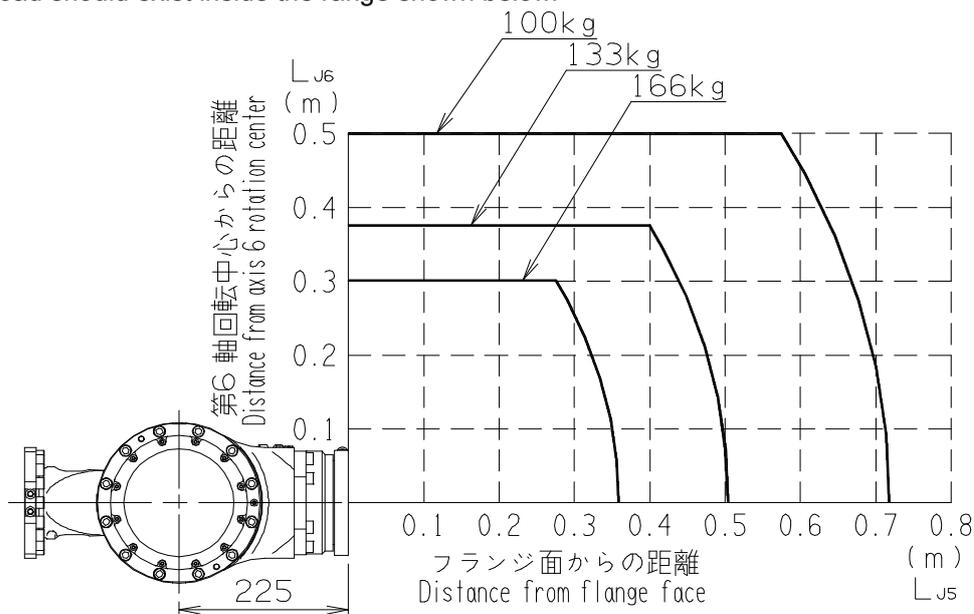

Load fixed on the tip of wrist is regulated by “allowable payload mass”, “allowable static load torque”, and “allowable moment of inertia”. Strictly keep the wrist load within each allowable value. If wrist load exceeds the allowable value, this robot is out of guarantee. Refer to the table of “2. Basic specifications” and following figures for the detail of each specification.

■ Torque map

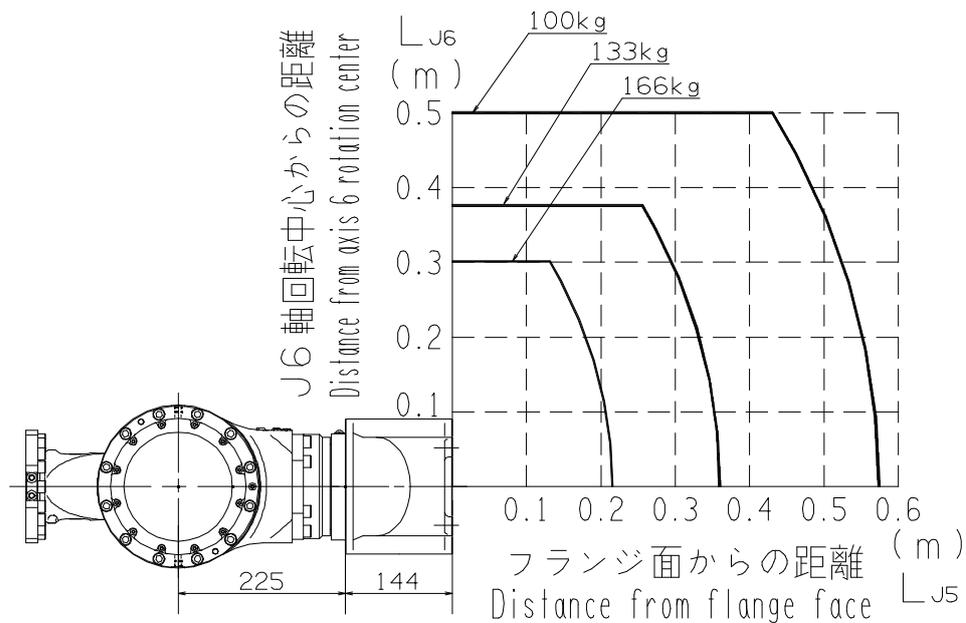

C.O.G. of wrist load should exist inside the range shown below.

【SRA166T-01】

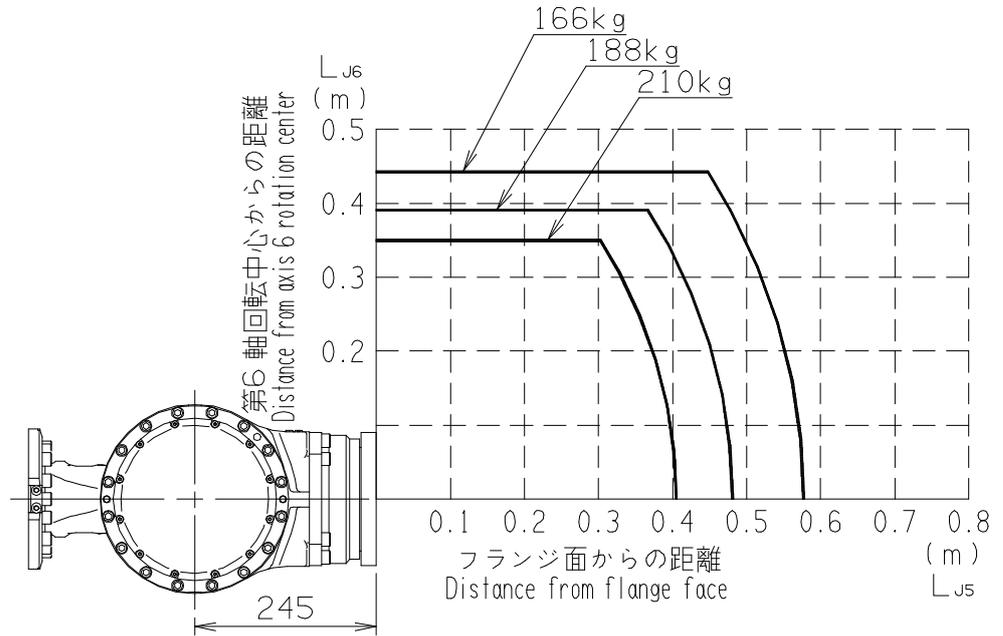

【SRA166TL-01】

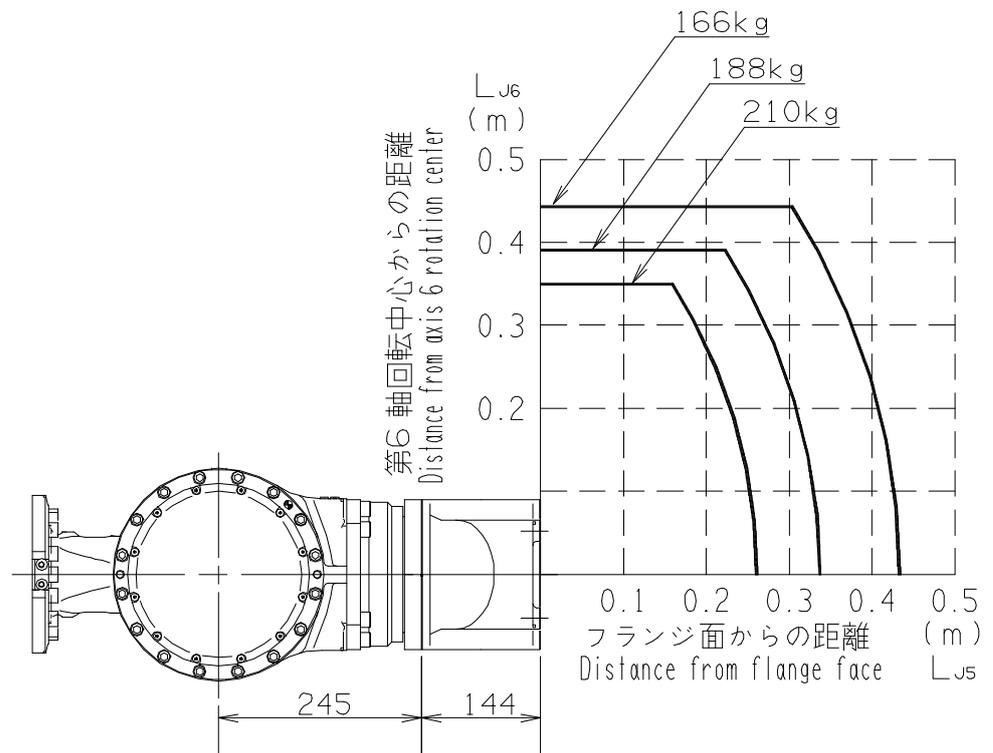

【SRA166T-01A】

【SRA210T-01】

【SRA210T-01A】

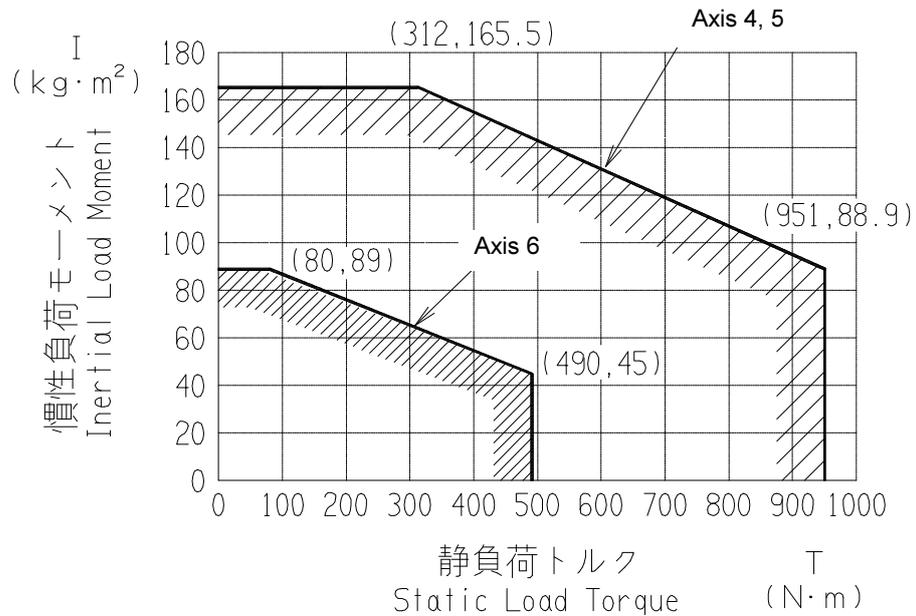

■ Wrist load conditions

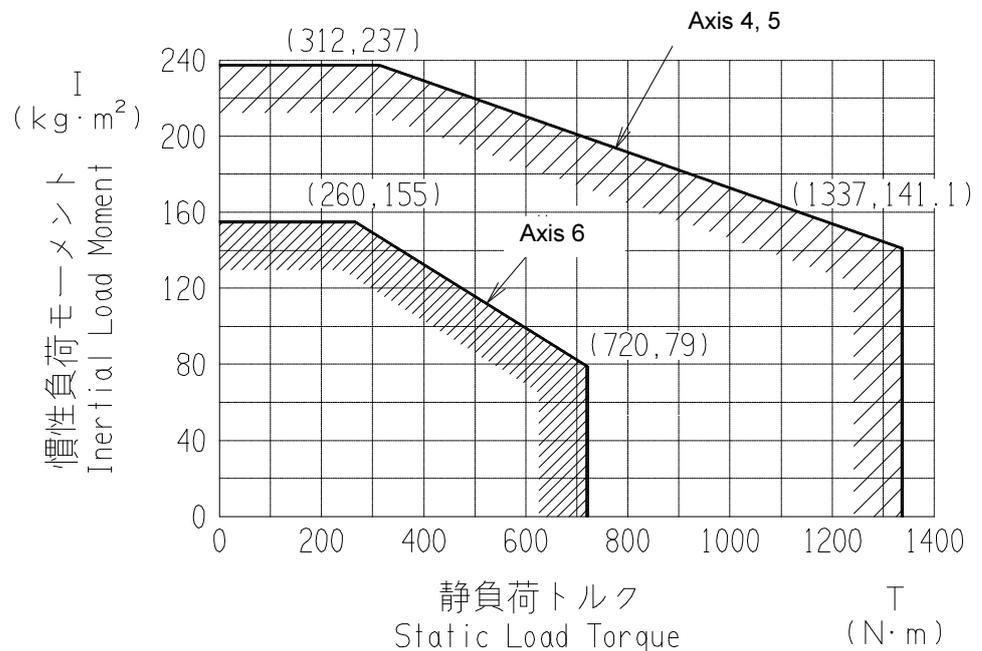

Static load torque and moment of inertia of wrist load should exist inside the range shown below.

IMPORTANT If the real inertia is over the limit written in "2. Basic specifications", maximum speed will be restrained by software.

【SRA166T-01】
 【SRA166T-01A】
 【SRA166TL-01】

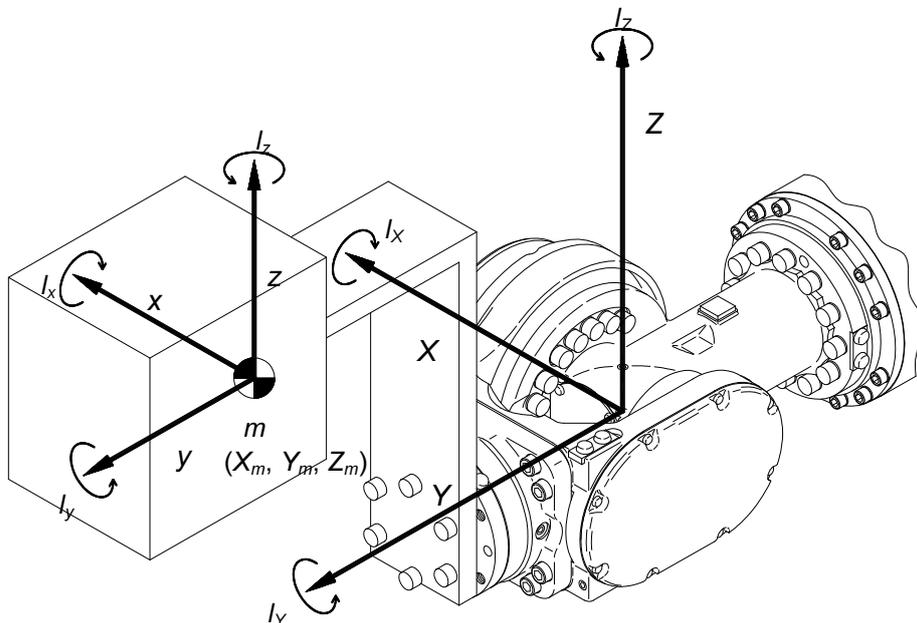

【SRA210T-01】
 【SRA210T-01A】

■ How to find the inertia moment of each axis

The following section shows general methods of calculating the inertia moment around each axis.

- X: Axis 5 rotation in the basic wrist configuration
- Y: Axis 6 and axis 4 rotation in the basic wrist configuration
- Z: Axis at right angles to the X and Y axes in the basic wrist configuration
- x: Axis parallel to the X axis in the load gravity center
- y: Axis parallel to the Y axis in the load gravity center
- z: Axis parallel to the Z axis in the load gravity center
- I_x : Inertia moment around the X axis passing through the load gravity center
- I_y : Inertia moment around the Y axis passing through the load gravity center
- I_z : Inertia moment around the Z axis passing through the load gravity center
- m : Load mass
- (X_m, Y_m, Z_m) : Gravity center coordinates of load

1. Inertia moment around axis 6

The inertia moment of around axis 6 is found by the expression shown below.

$$I_{J6} = I_y = m \cdot (X_m^2 + Z_m^2) + I_y$$

2. Inertia moment around axis 4 and axis 5

The inertia moment around axis 4 and axis 5 varies with axis 6 configuration. Consequently, in order to simplify the calculation, take a maximum value around the X and Z axes in above figure, as the inertia moment.

$$I_{J4J5} = \max (I_x , I_z)$$

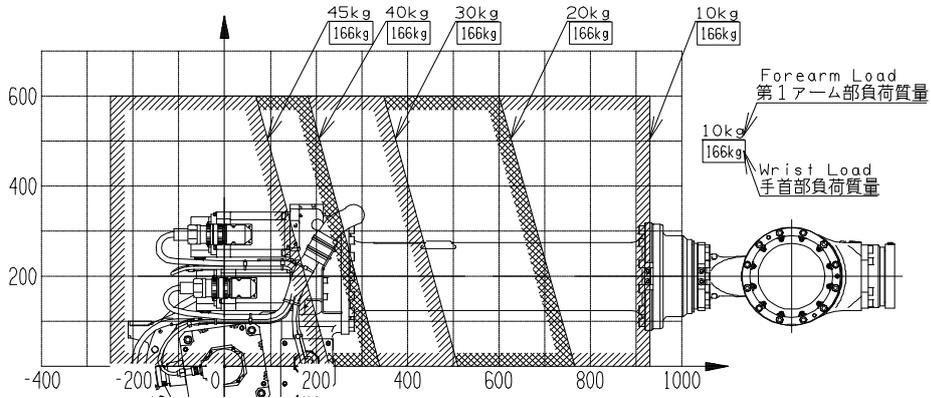

$$\because I_x = m \cdot (Y_m^2 + Z_m^2) + I_x$$

$$\because I_z = m \cdot (X_m^2 + Y_m^2) + I_z$$

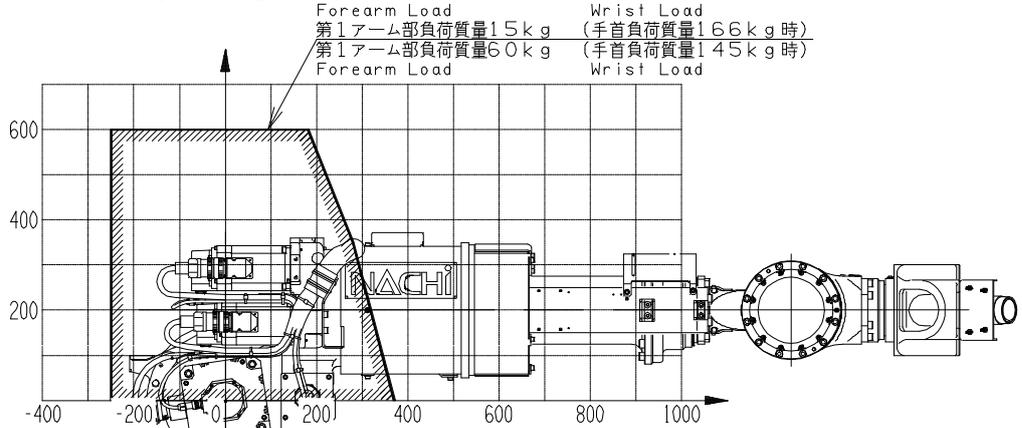

■ Allowable forearm load

Use the robot under condition that COG of the ancillary equipment on the forearm falls in the range shown below.

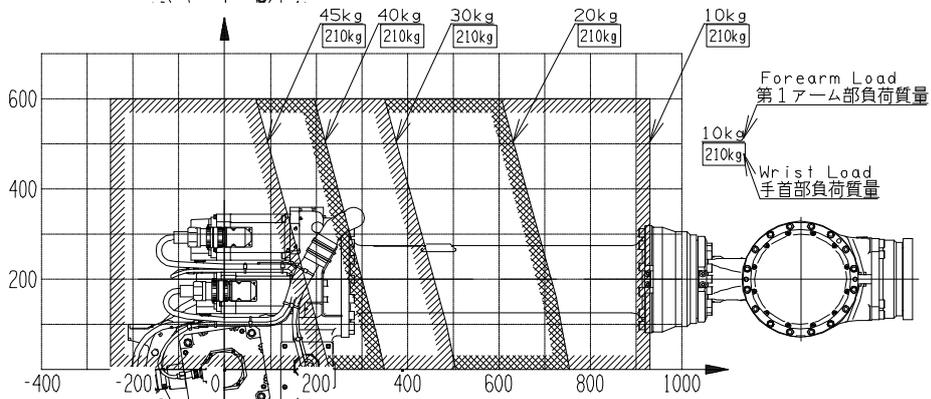

[SRA166T-01]
When wrist load is 166kg

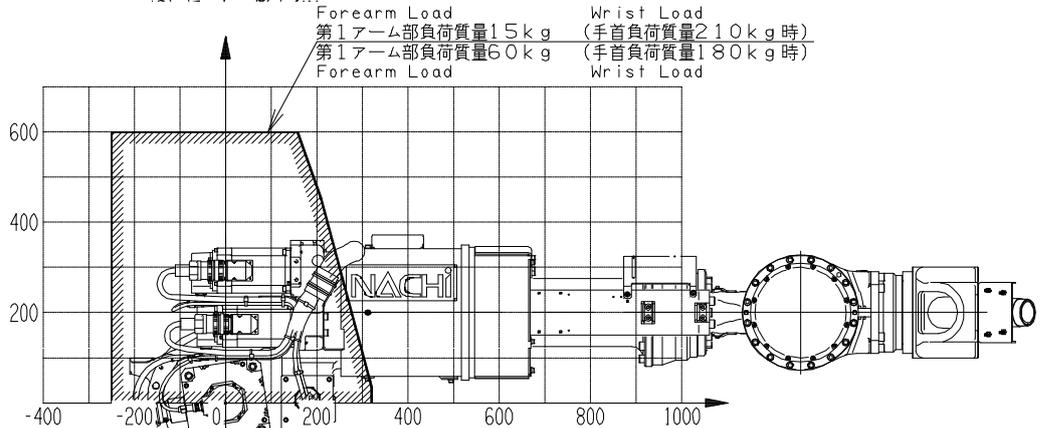

[SRA166T-01A]
When wrist load is 166kg or 145Kg

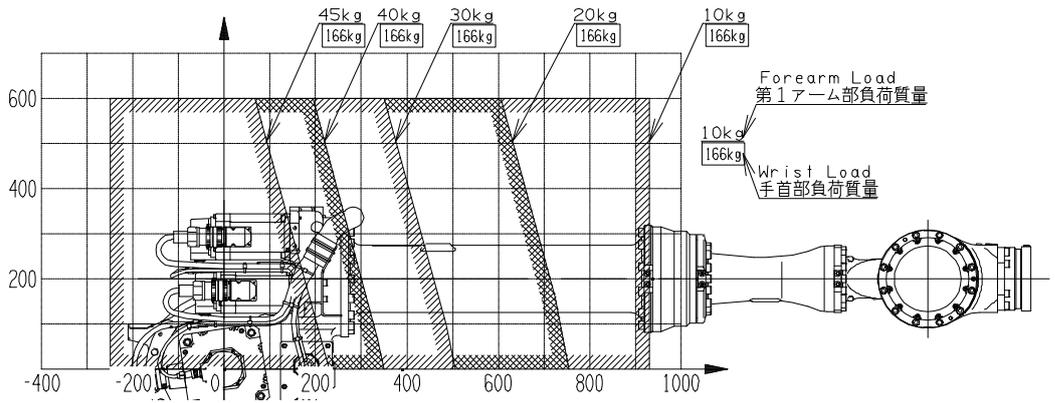

[SRA210T-01]
When wrist load is 210kg

[SRA210T-01A]
When wrist load is 210kg or 180Kg

[SRA166TL-01]
When wrist load
is 166kg

9. Transport procedure

Safety measures against transport

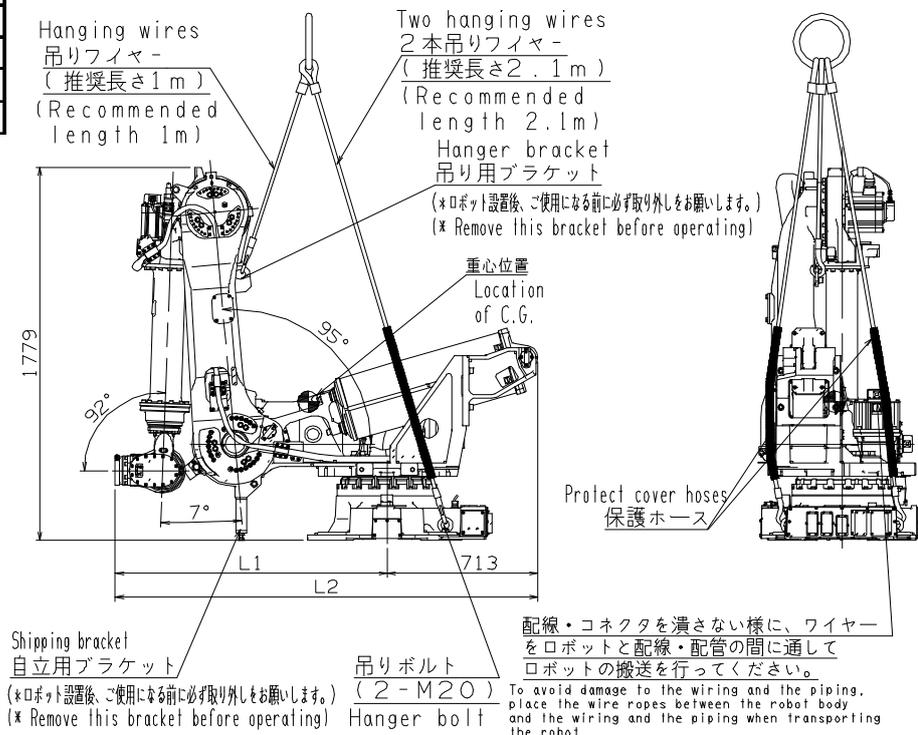

The following describes precautions for transporting the robot. Fully understand the precautions for safe transport work.

 WARNING	The robot must be transported by personnel who have licenses required for slinging work, crane operation, forklift truck operation, and others. The weight of the robot and controller is listed in the Operating Manual and the Maintenance Manual. Check for the weight, and then handle them according to procedures suitable for the weight.
 WARNING	To lift the robot or the controller, follow the procedures specified in the Maintenance Manual. Following any procedures other than those specified will cause the robot to topple over or drop during transport, thus resulting in accidents.
 WARNING	During transport or installation work of the robot, pay utmost care not to cause damage to wirings. Furthermore, after installing the robot, take protective measures such as using protective guards so that the wirings will not be damaged by workers or other persons, or forklift trucks or else.

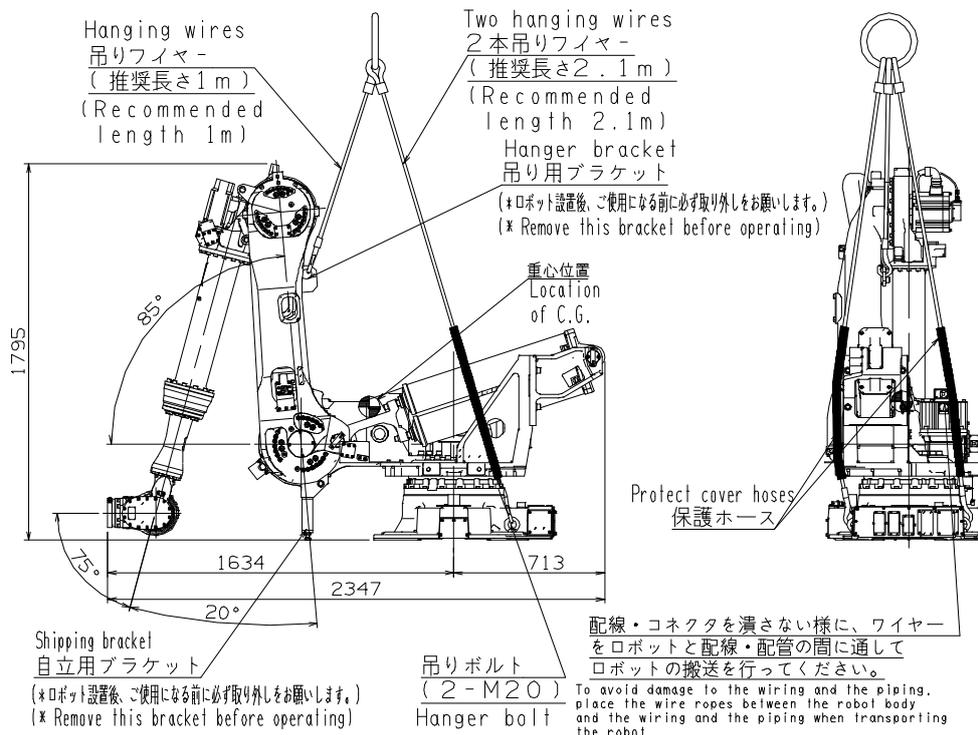

To transport the robot, make it a rule to use a crane.

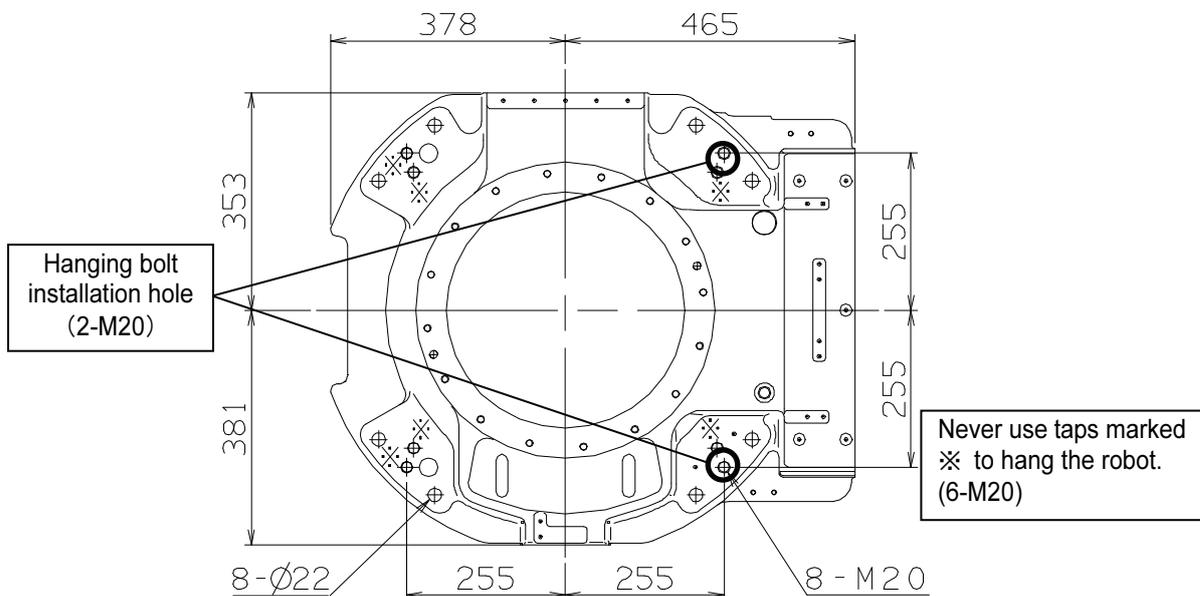

At first, move the robot to the configuration shown in figure and mount the hanger bracket on the robot arm and mount two M20 hanger bolts to the robot frame rear side. Then, be sure to lift the robot using three hanging wires (recommended length is 1m of arm side and 2.1m of swivel base side). Protect areas that contact the robot by rubber hoses to cover the wire ropes. For the areas to be covered, please refer to figure.

Robot type	L1	L2
SRA166T-01	1285	1998
SRA210T-01	1306	2019
SRA166T-01A	1426	2139
SRA210T-01A	1447	2160

【SRA166TL-01】

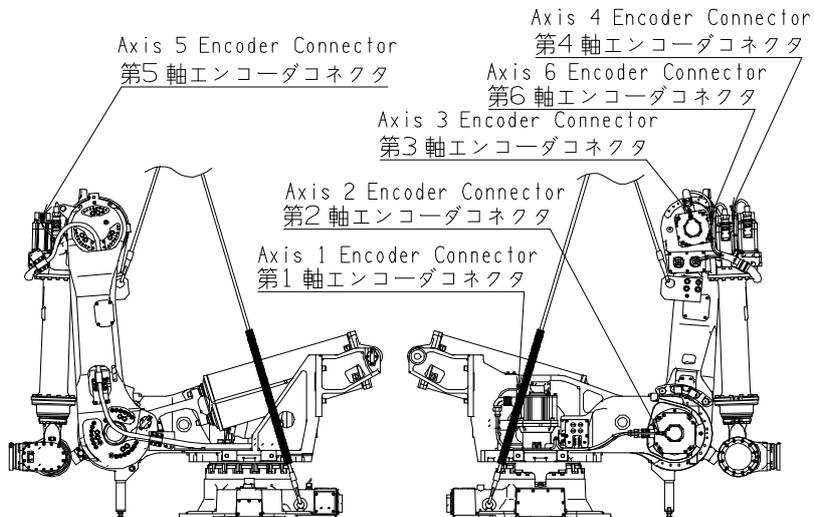

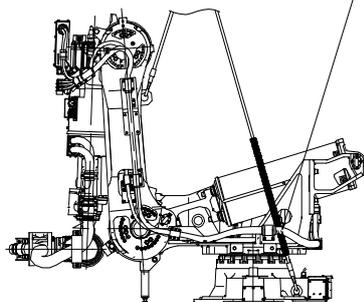

CAUTION

If hanging wires push the encoder connectors or wiring/piping, they may be broken when hanging the robot. When hanging the robot, please pay attention not to make the wires touch the encoder connectors and wiring/piping.

To avoid damage to the wiring and the piping, place the wire ropes between the robot body and the wiring and the piping when transporting the robot.

配線・配管を潰さない様に、ワイヤーをロボットと配線・配管の間に通してロボットの搬送を行って下さい。

10. Delivery style (specification which contains a robot)

1. There are three styles as shown below.

	Style	Details
1	Delivery on the truck	Robot is delivered on the truck near the entrance of customer's plant. (Installation and test-run is not included)
2	Delivery after installation and test-run	Robot is installed and test-run is done. (Teaching with work piece is not included.)
3	Delivery after installation and teaching with work piece	After style 2, teaching with work piece is done.

Because the expense is different, which form to choose be sufficiently examined.

2. Operation and maintenance education

The special spot operation guide and the special spot preservation guide are the outside of the estimation. Consult with each NACHI-FUJIKOSHI office for the details as for the schooling system.

11. Consuming power (Robot + Controller)

7.0 kVA (may vary according to the application and motion pattern.)

12. Paint color

Standard color Controller cabinet Munsell 10GY9/1
 Robot body Munsell 10GY9/1

13. Warranty

Elapse of 1 year after delivery. (8 hours/day running)

The specification and externals described in this specification might change without a previous notice for the improvement.
